

CORPORATE PROFILE

Construction Imaging provides document imaging software, hardware, installation, and support services to contractors, home builders, property managers, and material suppliers. The company has been providing award-winning document imaging solutions for 14 years and are considered the leader in the industry. Software support for clients is provided directly by the Construction Imaging's support team. Maintenance for hardware products is available from Bell & Howell, Fujitsu, Hewlett Packard, Kodak, and IBM.

Our software product solutions include EMC's Documentum/ApplicationXtender and Kofax products which allow us to provide industry leading document imaging and workflow solutions. Unique to our total enterprise offering is our own Construction Imaging developed routing and workflow software specific to the needs of the construction industry. These complementary products include Invoice Router, Document Manager for construction, HR, tickets, equipment and other applications, Backfill Blender, and Costplus Collector.

Construction Imaging's Chameleon Document Imaging is designed as an affordable solution for small to medium businesses. Chameleon applications are available for invoice routing and approval, job documents, property management, and much more. Chameleon offers easy to use functionality, integration into the business' accounting software, and an easy to use routing system for all documents.

Construction Imaging has software integrations with the following construction software vendors/products and is continuously developing new ones:
