E-mailXtender

CIS offers benefits of incorporating electronic media

CIS has introduced E-MailXtender which simply allows a user to incorporate all forms of electronic messaging media as a part of their document management system. In addition to providing comprehensive search and storage capabilities, E-MailXtender makes your document imaging complete with all forms of media stored for a complete records approach.

E-MailXtender incorporates all Electronic Messaging

This product provides both enterprise data storage and content management for electronic messaging. E-mailXtender products support Microsoft Exchange/Outlook, Lotus Notes/Domino, UNIX Sendmail and Bloomberg Mail.

This is a comprehensive, policy-based system that automatically collects, organizes, retains and retrieves email messages/attachments. It makes enterprise email easier to use and administer because it automatically copies every email and attachment into an Enterprise Message Center as well as generates a full-text index of all messages/attachments.

Because it enables administrators, supervisors, and users to conduct intelligent search/retrieval, it is a valuable tool that makes email systems easier to use and administer while maximizing the value of the information that it contains. It also provides administrators message-server diagnostic tools to analyze email traffic and evaluate storage requirements.

Other benefits include:

- Lets users access their own historical email from a central archive.
- Quickly, easily retrieves messages from an hour ago or years ago, by authenticated admin or supervisor.
- Eliminates need for personal archives such as Outlook's .pst files.
- Manages email as a record of business, in accordance with rules of evidence.
