

Ticket Workflow Software Solution for Heavy Highway Companies

## Material Ticket Handler

Paving, asphalt, heavy highway, concrete, and aggregate material handlers must organize and manage the flow of materials to keep projects on schedule, on budget, and on time. Material tickets are proof that materials were or were not delivered on time in the correct quantities.

Organizing and processing hundreds of material tickets is an essential – and expensive – element of any successful project. Your employees can spend needless hours searching, filing, copying, and collating tickets to prove that you delivered the materials and are paid promptly and correctly. Loss of tickets can mean slow payments, time wasted, and disrupted schedules.

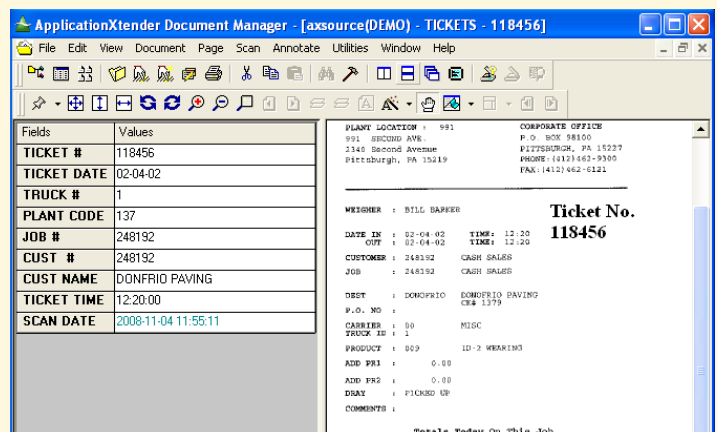

Construction Imaging offers a variety of affordable ticket management solutions tailored for all-sized companies, including a Material Ticket module that can instantly scan and read tickets with Optical Character Recognition (OCR) and merge the information captured by Weigh-Scale Ticketing so you can:

- Instantly find any ticket or group of tickets by date or customer for a 24-month period
- Email, fax, or print a ticket or group of tickets to suppliers or project managers in seconds

- Streamline your billing process to invoice your customers faster
- Find other uses for the space vacated by paper tickets!

It's easy! Here's all you do:

- Scan your own tickets from your plant, regional, or central location
- OCR reads ticket numbers by preprinted number, computer-generated number, or barcode
- Merge other required information from plant computer into the record for access to these indexes
- Add tickets from other vendors for entry into your accounting system
- Search for tickets by
  - Number
  - Customer number or name
  - Time and date
  - Job or project
  - Driver
  - Truck number

For more information about how this cost-effective ticket management module can help your organization save time and money, call Construction Imaging.
